Professional Summary

Full Stack Developer with 4 years of experience building scalable, high-performance AdTech platforms. Specialized in developing DSP dashboards, RESTful microservices, and real-time data processing systems using Java (Spring Boot) and React. Experienced in handling large-scale datasets with ClickHouse and ELK stack. Passionate about designing low-latency, distributed systems.

Technical Skills

- **Frontend:** TypeScript, ReactJS, NextJS, Redux, Tailwind CSS.
- **Backend:** Core Java, Spring Boot, JPA, Spring Security, NodeJs, Python, Redis.
- **Databases:** MySQL, MongoDB, ClickHouseDB, Postgres, Aerospike.
- **DevOps Tools:** Docker, GitHub, GitLab, Vercel, Netlify, Railway.
- **Other Tools:** Apache Solr, ELK Stack, Kafka, Postman, Swagger, IntelliJ.
- **AI & LLM:** OpenAI API, Prompt engineering, Test-to-SQL, Olama, Deepseek-R1, qwen2.5, llama3.2.

Professional Experience

Mobavenue Pvt Ltd. --- Software Developer L2

September 2022 - Present

- **Role:** Spearheaded the development and enhancement of the DSP dashboard, delivering new and upcoming features.
- **Technologies Used:** ReactJS, Spring Boot, MySQL, MongoDB, ClickHouseDB, ELK, Gitlab, Spring Security, Python, Ollama.
- **Responsibilities:**
 - Built and scaled RESTful microservices for DSP dashboards using Spring Boot, enabling high-performance campaign management and real-time analytics.
 - Architected an AI-driven Text-to-SQL engine using Python (FastAPI) and OpenAI/Ollama, translating natural language intents into highly optimized ClickHouse and MySQL queries.
 - Built a real-time conversational AI reporting interface utilizing WebSockets and Redis for multi-turn chat context, significantly improving data accessibility for users.
 - Developed responsive React-based UI modules for internal and client-facing teams.
 - Optimized data storage and query performance in MySQL, ClickHouse by approx 90%.
 - Decreased time used for indexing in Aerospike using CDT operation causing fast indexing by 60%.
 - Reduced operational overhead by 30% by automating Google Ads and reporting workflows using Google Scripts.
 - Delivered cost optimization by contributing to UA parser improvements, saving ~\$1,400 annually.
 - Designed and maintained centralized logging and monitoring using ELK stack for faster issue diagnosis and production stability.

Projects

AI Report Analyzer.

- Built an AI-powered report analysis tool using Spring AI and React to generate insights from business data.
- Integrated LLMs (Ollama, Deepseek-R1) for automated analysis and optimization suggestions with modular, extensible design.

New Sense Store (Ecommerce Platform).

- Designed a microservices-based backend using Spring Boot with API gateway and service discovery.
- Implemented synchronous and asynchronous communication and deployed on Netlify and Railway.

Analytics Dashboard.

- Developed a high-performance analytics dashboard using Next.js and TypeScript with SSR and SSG.
- Improved page load time, SEO, and data visualization through dynamic filters and optimized rendering.

Sportsphere – Sports Scoring App.

- Designed and implemented end-to-end system architecture for a real-time sports scoring application.
- Built RESTful APIs using Node.js and designed a normalized, performance-optimized PostgreSQL schema for efficient score and event management.
- Developed a cross-platform mobile UI using React Native to deliver a responsive, real-time scoring experience.

Education

- **Bachelor of Engineering (B.E.)** Mumbai University | 8.3 CGPA | 2018-2021
- **Diploma** Mumbai University | 83% | 2015 – 2018
- **SSC (10th Grade)** Maharashtra Board | 81% | 2004 – 2015
